Agents & git

Claude, Gemini, Codex in herdr panes. The sidebar shows each one as **working**, **blocked** (needs you) or **done**; a Mac notification tells you.

🧰 AGENTS	
Ctrl-B , . .	Prev · next agent
c laude · g emini	Start one in a pane
c laude -- resume	Pick an old session
📁 PROJECTS	
h p N A M E	Go to a project (hp -l lists)
h p ~/ f older	New workspace for any folder
h p	Reopen all active projects
h p -- i ndex	Write PROJECTS.md index
Ctrl-B W · T · P	Rename workspace · tab · pane
Master list: ~/ .config/herdr/projects.tsv (status, folder, what). ⌘-click paths from ls , fd , rg , hp - l .	
➡ HAND OFF	
" hand off to gemini "	Tell Claude: it writes a note, opens Gemini beside it
Ctrl-B a	Picker: from which pane, to which agent
h h c laude	From a shell: fresh Claude + note
h h g emini -- n ote f .md	Use your own note

Notes go in **.handoff/** (git ignores it). New agent summarises, then waits for your go.

🔗 GIT — LAZYGIT (CTRL-B I)	
S pace	Stage / unstage file
c	Commit
p · P	Pull · push
E nter	Open file / commit diff
[·]	Switch panel tab (log, branches)
? · q	Every key · quit
🔍 DIFF REVIEW (CTRL-B D)	
u · b · t	Uncommitted · branch · last turn
c · v	Comment line · select lines
s	Send comments to the agent
Ctrl-B G	New git worktree (side branch)

Diff review works on local folders; on remote machines use lazygit.

Claude sessions

Statusline: context bar (yellow 70%, red 90%), ⌚ **Nm** idle, ❄ **cache cold** after 60 min. Cold = next message costs more, nothing is lost.

🔄 CLOSING THE LAPTOP	
Remote panes	Keep running
Mac panes	Pause until you open it
Long work	Put it in a remote workspace

Login-node reboots stop running work. Real compute goes in **sb**atch.

🔗 SESSIONS & NOTES	
c laude -- r esume	Open an old session
nn N A M E " t itle"	New lab-notebook entry
✳ CACHE & COMPACT	
Short break	Nothing to do
Away 1 h+, bar > 50%	Save a summary, then / c lear
Task step done	/compact keep: ...
Mid-debugging	Do not compact
Bar yellow	Compact at next step
Bar red	Compact now, or hand off
